

BG Europa (UK) Ltd was established in 1988 from the Barber Greene England company following Barber Greene's acquisition by Astec. Technology and expertise existing within Barber Greene at that time was incorporated within BG Europa (UK) Ltd. This expertise has been utilised to develop equipment integrating new technologies whilst retaining the traditional quality and dependability of Barber Greene. In 1994 BG Europa (UK) Ltd moved to new 800m² purpose built premises in Wickhambrook, Suffolk, England. Only 10 miles from Bury St Edmunds, the home of Barber Greene England, the move allowed integration of the design office, spares department and stores whilst retaining links with local suppliers.

BG Europa (UK) Ltd is a family owned business providing customers with quality equipment offering low operational costs and long life expectancy at competitive prices. The importance placed on in house engineering expertise allows BGE to bespoke all equipment to exactly match customers requirements.

BG Europa (UK) Ltd retains strong links with Astec Inc as agents for the Astec range of equipment and stockists of genuine Astec parts. In 1999 BG Europa (UK) Ltd became agents for Soter Inc incorporating the proven Soter Foamed Bitumen technology into the new KSF range of Foam Mix Plants. The most recent addition to the product range came in 2001 when FMA Ullrich awarded BG Europa (UK) Ltd the UK agency for their Hot Asphalt Storage Equipment. Recognising BG Europa's commitment to quality and service in not only equipment supply and installation, but also local spare parts availability.
